

Warm-Up: Mario Kart

Prepared by Mark on February 6, 2025

Problem 1:

A standard Mario Kart cup consists of 12 players and four races.

Each race is scored as follows:

- 15 points are awarded for first place;
- 12 for second;
- and $(13 - \text{place})$ otherwise.

In any one race, no players may tie.

A player's score at the end of a cup is the sum of their scores for each of the four races.

An n -way tie occurs when the top n players have the same score at the end of a round.

What is the largest possible n , and how is it achieved?
